

Highways
contractors

Reliable, effective highway lighting is critical to the safety of road users and pedestrians.

SSE Enterprise can handle every stage from initial project development and design, through to installation, connection, maintenance and removal of all types of highway lighting electrical equipment.

We can provide you with solutions that comply with environmental, regulatory and legislative requirements, which also meet your budget.

As a leading highways electrical contractor in the UK and Ireland we provide expert teams, industry accreditation and insight into the challenges posed by highways projects. We are dedicated to helping find solutions and improve standard.

We work with highways authorities and local councils to replace thousands of SON lanterns with the latest LED technology. Working with the industry's leading LED lamp manufacturers and Central Management Systems (CMS), we can ensure your highways street lights are future proofed.

Safety first

Carrying out projects within the highways environment can be extremely hazardous. However, safety is one of our core company values and our commitment to protecting our customers, colleagues and the general public comes first in everything we do. Our safety policies and management systems are designed to identify and reduce risk at all stages, and the industry leading safety record of our highway lighting teams has been recognised by successive RoSPA awards.

Nationwide coverage, local service

Having a network of offices across the UK and Ireland, gives us a supply chain with real strength and depth. This means we're able to develop, install and maintain highway lighting schemes of any scale or complexity.

We have created solid partnerships with many other Local Authority and Highway Agency customers, built upon honesty, openness and co-operation.

Energy efficiency

We use safe working methods and implement technological innovations. These innovations include LED white light, CMS and energy saving opportunities through an "Invest to Save" methodology. We offer a tailored approach, ensuring the most optimum light levels are achieved through the most energy efficient means. We ensure all completed works are of an adoptable standard.
